Project Description:

This is a first Public Meeting for the Burk's Falls West Solar Project, due to a change in the Project location as outlined on the map below. Pursuant to the Act and Regulation, the facility, in respect of which this Project is to be engaged in, is a Class 3 Solar Facility. If approved, this facility would have a total maximum name plate capacity of 10 MW.

The Draft Project Description Reports, titled *Project Description Report Northland Power Solar Burk's Falls West*, describes the Project as a solar electric generating facility that will utilize photovoltaic (PV) panels installed on fixed racking structures. DC electricity generated from the PV panels is converted to AC electricity by an inverter. The voltage level of the AC electricity produced by the inverter is stepped-up to distribution level voltages by a series of transformers. Written copies of the revised Draft Project Description Report are available for public inspection at www.northlandpower.ca/burksfallswest and at your local municipal office.
